Nicolo Laurent
Informatics Engineer
Riot Games

Dear Mr. Laurent,

I would like to work in Riot Games since I started playing League of Legends, one of my most played games. I think that right now your company is one of the best in the world, and it will be more and more important with time.

As you can read in my curriculum I love videogames and I have studied Computers Engineering in UPC, a really good university in Spain. I have some experience in your company because I made my practices in your headquarters in Barcelona.

I have been playing your game for many years, my practices were made in your company, some people of the Spanish team know me and I know really well your games, so I think I accomplish all of your requests.

Thank you for your time,

Kristian Stoykov
